Project Status Report

Deep Learning OCR System - Week 12

Summary: the recognition models were trained on IAM handwriting and synthetic printed text. The CRNN and CNN-BiLSTM baselines are compared against a pretrained Transformer (TrOCR) using character and word error rates on held-out test sets.

Next steps: improve layout analysis for multi-column documents and add Hindi handwriting support.

Model	CER	WER
CNN-BiLSTM	baseline	baseline
CRNN	model 2	model 2
